

Glass for special applications according to clients specifications

[1]

Our long-standing experience in **unusual production orders**, our equipment and an IT-based manufacturing execution system enable us to offer technically difficult products on the basis of many types of float glass.

Our services are not limited to production, but also cover consultation concerning the use of glass for specific applications or modifying the client's designs due to the need to adapt them to the technical conditions of glass. These orders are completed starting with design consulting to prototypes and test batches to the order proper.

Examples of special glass applications produced by Dubiel Vitrum:

- museum – a backlit glass floor (on a mezzanine – suspended), approx. 130 m² – PVB ESG
- Household goods factory – glass elements of ventilation hoods (RAL enameled, with backlit LED pictograms)

- shipyard – bull’s eyes (ship windows) for luxury sailboats
- panes for welding covers
- rail carriage manufacturer – panes for carriage sliding doors
- industrial machine manufacturer – glass with pictograms for sensor control
- building contractor – interior glass acoustic walls in an office building
